Sommario

Laurea Triennale in informatica - Università di Salerno

Corso di *Ingegneria del Software* – Prof.ssa F. Ferrucci, Prof. Carmine Gravino

Laurea Triennale in informatica - Università di Salerno

Corso di *Ingegneria del Software* – Prof.ssa F. Ferrucci, Prof. Carmine Gravino

1. Introduzione

Questo documento mostra i risultati dell'esecuzione dei test case di unità delle varie componenti del software web Easy Agreement. In particolare, sono stati testati i controller e i model del software con l'utilizzo di Mocha&Chai, e successivamente è stato effettuato il testing di sistema con Selenium.

1.1 Identificativo del documento

Il documento in questione è caratterizzato da alcune proprietà che lo definiscono univocamente; tali proprietà riguardano la data di stesura, i nomi degli autori del documento e l'approvazione da parte dei project manager.

1.2 Scopo

Il Test Summary Report fornisce una presentazione dei casi di test di unità, di integrazione e di sistema per il software Easy Agreement. I membri del team si sono impegnati nel verificare che le singole unità del sistema (classi e metodi) abbiano avuto il comportamento atteso.

1.3 Riferimenti

• EA_RAD_V_2.1.docx
• EA_SDD_V_1.1.docx
• EA_ODD_V_1.1.docx
• EA_TCS_V_1.1.docx

Corso di *Ingegneria del Software* – Prof.ssa F. Ferrucci, Prof. Carmine Gravino

2. Risultati test di unità

Di seguito vengono riportati i risultati dei test di unità in base alle varie gestioni del sistema.

2.1 Features testate

Il testing d'unità si propone di effettuare il test dei control presenti all'interno della propria gestione. In particolare:

1. GT – GESTIONE TUTOR:
   - viewListControl
   - tutorControl
2. GLA – GESTIONE LEARNING AGREEMENT
   - learningAgreementControl
3. GAR – GESTIONE AUTENTICAZIONE E REGISTRAZIONE
   - loginControl
   - registerControl
4. GN – GESTIONE NOTIFICHE
   - notificationControl
5. GP – GESTIONE PROFILO
   - studentControl
   - academicTutorControl
   - externalTutorControl
   - administratorControl
6. GR – GESTIONE RICHIESTE
   - requestControl
7. GD – GESTIONE DOCUMENTI
   - documentControl
8. GC – GESTIONE CHAT
   - messageControl

Laurea Triennale in informatica - Università di Salerno

Corso di *Ingegneria del Software* – Prof.ssa F. Ferrucci, Prof. Carmine Gravino

2.2 Panoramica dei risultati dei test

2.2.1 Gestione Tutor

3. Risultati test di integrazione

3.1 Panoramica dei risultati dei test

Lo scopo del test di <u>integrazione</u>, data l'architettura software impiegata, è di verificare il corretto funzionamento degli endpoint dell'applicazione, controllando il risultato atteso dalla response. Esso rappresenta una delle fasi di testing più importanti, in quanto consiste nella verifica delle interazioni tra 2 o più componenti. Per eseguirlo è stato utilizzato Mocha. Elenchiamo qui i risultati:

6. Riepilogo del testing

	Numero di componenti testate	Numeri di errori trovati	Numero di errori corretti	Numero di componenti non testate
Control	13	0	0	0
Model	9	0	0	0
Integration Testing	1	1	1	0

Esempio:

Durante lo sviluppo del testing d'integrazione abbiamo riscontrato dei problemi nel settare la sessione per alcune funzionalità.

In questo esempio il problema riguardava la compilazione del Learning Agreement da parte dello studente.

Laurea Triennale in informatica - Università di Salerno

Corso di *Ingegneria del Software* – Prof.ssa F. Ferrucci, Prof. Carmine Gravino

Siamo riusciti a capire il problema e lo abbiamo risolto inserendo le richieste al server, dopo quella del login, quando necessario. In questo modo era l'utente loggato al sistema ad eseguire queste funzionalità. Questo è il modo con il quale abbiamo risolto.

Laurea Triennale in informatica - Università di Salerno

Corso di *Ingegneria del Software* – Prof.ssa F. Ferrucci, Prof. Carmine Gravino

7. Glossario

- RAD (Requirement Analysis Document): Documento di Raccolta e analisi dei Requisiti; contiene l'elenco dei requisiti funzionali e non funzionali individuati in fase di individuazione degli stessi e la loro analisi sotto forma di scenari e casi d'uso. I mock-up mostrano una possibile implementazione dell'interfaccia del sistema.

- SDD (System Design Document): Documento all'interno del quale viene riportata la progettazione del sistema come risultato di una prima fase di modellazione: contiene una suddivisione ad alto livello del sistema nei sottosistemi che lo comporranno.

- ODD (Object Design Document): Documento che riporta e analizza gli oggetti che compongono il sistema analizzando le componenti a più basso livello, riportandole così come saranno implementate.

- TCS (Test Case Specification): Documento che riporta i casi di test pianificati.
